Directions for the use of eyelash permanent wave

The kit contains:

- #1 Perm lotion
- #2 Setting lotion
- #3 Nourishing agent
- #4 Cleanser
- 8 pairs/16pcs of small eyelash rods
- 8 pairs/16pcs of medium eyelash rods
- 8 pairs/16pcs of large eyelash rods
- 10ml eyelash glue, white

Application:

1. First clean the makeup from your eyes and eyelashes. The skin has to be non-greasy for the curler to hold on to it.

   Then choose a curler corresponding to the thickness of the eyelashes.

   Hold the curlers only at their ends since they have a self-adhesive coating and lose their adhesiveness upon touching these surfaces.

   The curlers can be bent to the shape of the eyelid while they are in the plastic film.

2. Now place the curler on the eyelid close to the eyelashes, press both ends gently with a wooden stick so that it sits snugly along the entire length. If the ends of the curler do not stick firmly, then make use of the white glue from the bottle that has been provided. The glue is water-based and can be easily removed with water later on.

3. Then comes the most important step: Now you can place the eyelash on the curler. See that they lie **absolutely parallel and straight**, the slightest inaccuracy can bring adverse results. You can straighten each eyelash individually by adjusting them with a small brush and toothpick until they are placed perfectly. Go about with utmost care in this process of aligning the eyelashes, it is certainly worth it.

   For eyelashes that come unstuck from the curler use the white glue to fix them on.

4. Now apply lotion no. 1 with a thin micro-brush on one-third of the lower part of the eyelashes.

   Our suggestion: do not apply the lotion on the eyelashes entirely but just on one-third part of the eyelashes in order to get a nicely curving sweep straight towards the top. If the eyelashes are fully coated with the lotion then the eyelashes could curl up too much and as a result end up looking too short.

   Depending on the thickness of the eyelashes, lotion no. 1 should be left on for 10-15 minutes. It can then be removed with a cotton swab.

5. Then proceed in the same manner with lotion no. 2, leaving it on similarly for 10-15 minutes before removing it with a cotton swab.

6. Following this, lotion no. 3 is applied and left on for about 5 minutes.
7. Lotion no. 4 is applied last. It cleanses the eyelashes in order to detach them easily from the curler.

You can now peel the eyelashes away carefully from the curler and marvel at the results.
